

BUILDING A PIT

1

CLEARING

2

DIGGING

3

SECURING

1

WHEN BUILDING A FIRE PIT BE SURE TO CLEAR A RADIUS OF AT LEAST A 5 FOOT / 2 METER AREA FROM THE PIT ZONE OF ALL NATURAL DEBRIS. STICKS, LEAVES, BRANCHES, OR DEAD GRASS CAN CATCH FIRE FAST!

2

TIME TO START DIGGING! ENSURE THE DEPTH OF YOUR FIRE PIT IS AROUND A FOOT DEEP AND THERE ARE NO ROOTS OR BRANCHES GOING THROUGH IT.

3

THE FINAL TOUCH FOR A GOOD PIT IS A GOOD AND STABLE ROCK-LINED PERIMETER. FIND SOME LARGE ROCKS AND STREAMLINE THEM AROUND THE EDGE OF THE HOLE YOU JUST DUG. REMEMBER TO PACK THEM IN TIGHTLY!
